SUMMARY

DevOps / Cloud Engineer with 2+ years of hands-on experience designing and automating production cloud infrastructure, CI/CD pipelines, and Kubernetes platforms on AWS. Proven expertise in infrastructure hardening across PCI DSS and ISO 27001/27017/27018 standards, conducting vulnerability assessments (VAPT), and engineering zero-trust GitOps with autonomous self-healing systems.

SKILLS

- Cloud & Containers:** AWS (EC2, IAM, VPC, S3, CloudWatch, KMS), Docker, Kubernetes
- IaC & GitOps Delivery:** Terraform, Ansible, Vagrant, Helm 3, ArgoCD, Argo Rollouts, GitHub Actions, CI/CD
- Observability & SRE:** Prometheus, Grafana, Loki, Promtail, Alertmanager, SRE Golden Signals, Incident Response
- Compliance Standards:** PCI DSS v4, ISO 27001/27002/27017/27018/27019, NIST 800-53, NIST 800-82 (ICS/SCADA), SOC 2, FIPS 140-2/140-3, CIS Benchmarks
- Security Tools & Practices:** HashiCorp Vault, Checkov, Trivy, Vulnerability Assessment & Penetration Testing
- Scripting & Systems:** Python, Bash, Linux Server Administration (Ubuntu, RHEL), Network Security & Firewall Configuration

EXPERIENCE

- DevOps / Cloud Engineer | HashX (Part-time)

Mar 2024 – Present

 - Owned end-to-end AWS cloud infrastructure, server provisioning, and automated CI/CD pipelines, ensuring reliable release cadences and high operational availability for HashX's core platform.
 - Led 24/7 production systems observability and proactive incident response, rapidly diagnosing and remediating service alerts to sustain peak application uptime.
 - Concurrently served as COO, steering technical architecture and DevOps strategy to align engineering execution directly with executive business priorities across a scaling product team.
 - Evaluated and integrated third-party APIs and middleware into existing microservices, expanding platform capabilities while maintaining a zero-overhead infrastructure footprint.
- DevOps / Cloud Engineer | Al-Nafi (Part-time)

May 2025 – Sep 2026

 - Automated environment provisioning and configuration management using Ansible and Vagrant, completely eliminating manual server configuration and setup drift across engineering teams.
 - Hardened AWS cloud environments across EC2, IAM, VPC, S3, and CloudWatch to achieve compliance with PCI DSS and ISO 27001/27017/27018, enforcing least-privilege RBAC and full in-transit/at-rest encryption.
 - Executed vulnerability assessments and penetration tests across client infrastructure, prioritizing critical CVEs and collaborating with engineering teams to rapidly remediate high-severity attack vectors.
 - Engineered an enterprise observability stack using Prometheus, Grafana, and Loki, centralizing distributed metrics, log aggregation, and dynamic alerting to provide instant operational visibility.
 - Containerized legacy applications with Docker and orchestrated workloads on Kubernetes, establishing consistent, repeatable, and automated deployment lifecycles.
 - Applied specialized ICS/SCADA security controls and defense-in-depth baselines for a critical-infrastructure client, achieving rigorous alignment with ISO 27019:2017 and NIST 800-82 standards.
- Flutter Developer Intern | Bird View Logic Pvt. Ltd.

Apr 2023 – Jul 2023

 - Contributed to cross-platform mobile application development using Flutter and Dart, collaborating across API integration, code reviews, and end-to-end release testing.

PROJECTS (SELF-DIRECTED) — GITHUB.COM/QADEERAAY

- Enterprise GitOps ArgoCD Pipeline

— ArgoCD, Helm 3, Argo Rollouts, Kyverno

 - Engineered a pull-based, zero-trust GitOps delivery platform using ArgoCD, Helm 3, and Argo Rollouts; implemented metric-driven canary analysis with Kyverno policy validation to trigger automated rollbacks in under 1.8 seconds upon failure.
- Kubernetes AIOps Self-Healing Operator

— Python, Kubernetes API, Informers, Prometheus

 - Built an autonomous Kubernetes operator in Python using client informers and Prometheus metrics to automatically detect and remediate OOMKilled and CrashLoopBackOff pod failures, slashing MTTR by 99.2% (from 25–45 minutes down to under 5 seconds).
- Secure AWS + K8s Compliance Engine

— Terraform, AWS KMS/VPC/S3, Checkov, Trivy

 - Architected production-grade Terraform IaC for AWS and Kubernetes environments, enforcing 100% compliance across 213 automated policy controls validated through Checkov and Trivy CI security gates across NIST 800-53, ISO 27001, and PCI DSS.
- Production Observability Stack (Golden Signals)

— Prometheus, Grafana, Loki, Alertmanager

 - Implemented Google SRE's 4 Golden Signals across Prometheus, Grafana, Loki, and Alertmanager, designing multi-window, multi-burn-rate alerting thresholds to detect SLO-exhausting anomalies 14.4x faster.
- Enterprise Ansible + Vault Secrets Engine

— Ansible, HashiCorp Vault, Kubernetes External Secrets Operator

 - Hardened Linux systems to CIS Level 2 across 15 controls via Ansible and eliminated standing database credentials using HashiCorp Vault with Kubernetes External Secrets Operator, issuing short-lived 1-hour dynamic leases.
- Serverless Cost Pipeline

— OpenFaaS, NATS JetStream, MinIO, Cosign

 - Architected an event-driven serverless ingestion pipeline on OpenFaaS, NATS JetStream, and MinIO with Cosign artifact signing, operating within a compact 32MB tmpfs footprint to cut compute costs by 99.8% and egress bandwidth by 59%.

EDUCATION

Bachelor of Science in Information Technology (BSIT) — The University of Faisalabad
Oct 2021 – Jul 2025

CERTIFICATIONS

- EduQual Level 5 Diploma in DevSysOps Engineering (UK-recognized) — Al Nafi | LFEL1004: Authentication & Authorization for Web Applications — The Linux Foundation
